

Chibson / Daredevil Placebo Effect Pedal

Hey there!

Thanks for grabbing one of these amazing pedals, now for the fun part...

The enclosed PCB will allow you to build one of several NPN (negative ground) fuzzes that can be wired up to the Placebo pedal. The switches and jacks are already prepped, just a few more wires and some components and you're good to go.

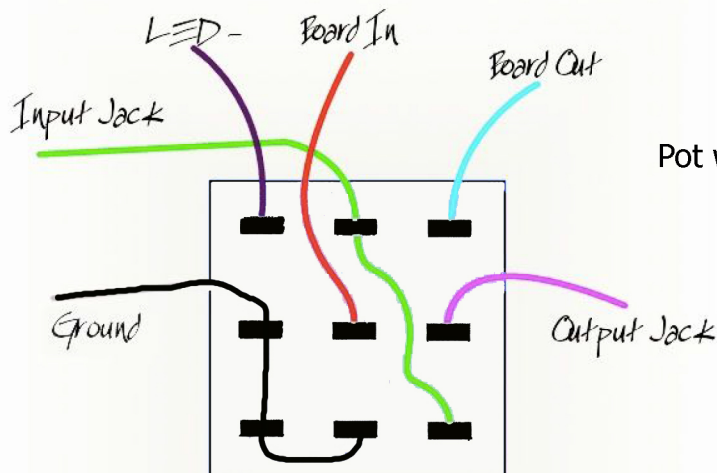

There are many, many schematics and websites with info on cool circuits.... we've included a build sheet with component values for several classic circuits which you can download

Ordering parts: Both of these sites are reputable sources for quality parts and quick shipping. They will have everything you need.

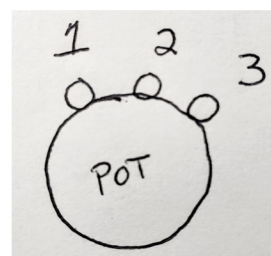

<http://smallbear-electronics.mybigcommerce.com/>

<https://stompboxparts.com/>

As for wiring the switch... it's already set for true bypass. Use this diagram to include the PCB.

Pot wiring: the square pad is lug 1 for each pot.

So have fun, experiment, and make some noise... and thank you from Chibson & Daredevil.

Please do not email us about any complications building your pedal.

Any and all info you need is right at your fingertips, we are merely offering a cool gateway drug into the world of DIY effects building. Hopefully you create something awesome and feel inspired to blast some Fuzz. When you do... please share it with the rest of the world on the interweb and tag @chibson_usa & @daredevilpedals . RnR.
